

CRYSTAL QUEST® Sharp Reverse Osmosis and Ultrafiltration Combo Floor Water Coolers

CRYSTAL QUEST® Sharp Bottleless Reverse Osmosis and Ultrafiltration Combo Water Cooler Systems are advanced, attractive and durable. They are the perfect way to enjoy clean, crisp, filtered water without the hassle of dealing with heavy bottles and delivery schedules. Save money, space, and time with your own bottleless water cooler system. Enjoy filtered water 24 hours a day. Installs easily. Plumbs directly to your cold water line for a continuous water supply.

- Optional:**
- UltraViolet (UV)
 - Flood prevention valve
 - Ozonator
 - Cup holder
 - Cups

Effectively removes hundreds of contaminants from water*

Water travels through 9 stages of filtration:

- **In stage 1**, water passes through a granulated activated carbon (GAC) cartridge. GAC is universally recognized and widely used as an effective adsorbent for a wide variety of organic contaminants such as chlorine (99.9%), chemicals linked to cancer (THM's, benzene), pesticides, herbicides, insecticides, volatile organic compounds (VOCs), PCB's, MTBE's and hundreds of other chemical contaminants that may be present in water, which cause bad tastes and odors.
- **In stage 2**, water passes through a reverse osmosis membrane, which removes substantial amounts of most inorganic chemicals (such as salts, metals, minerals), most microorganisms including cryptosporidium and giardia, and most inorganic contaminants.
- **In stage 3**, water travels through an Ultrafiltration (UF) membrane. Ultrafiltration (UF) is an important purification technology used for the production of high-purity water. UF is effective for the removal of colloids, proteins, bacteria, viruses, parasites, protozoa and pyrogens (e.g., gram-negative bacterial endotoxins), other organic molecules larger than .01 micron, and most other water contaminants known today.
- **In stage 4**, water flows through one-micron filter pads (1 micron equals 1/25,000th of an inch), which remove suspended particles such as silt, sediment, cysts (Giardia, Cryptosporidium), sand, rust, dirt, and other undissolved matter.
- **In stages 5 and 6**, water flows through a bed of media made of a special high-purity alloy blend of two dissimilar metals - copper and zinc (KDF-55D® and KDF-85D®). KDF is a major advancement in water treatment technology that works on the electrochemical and spontaneous-oxidation-reduction (REDOX) principles. Chlorine is instantaneously and almost inexhaustibly oxidized.
- **In stage 7**, water flows through ceramic balls, which remove harmful bacteria such as E. Coli, Fecal coli form, Salmonella, Streptococcus, cysts (Cryptosporidium, Giardia) and sediment.
- **In stage 8**, water travels through another bed of granulated activated carbon (GAC).
- **In stage 9**, water flows through another one-micron filtration pad for further reduction of undesirable particles. The end result is a great reduction or the total elimination of a wide variety of contaminants.

Optional add-on cartridges to filter: fluoride, nitrates, arsenic and other water contaminants

Features

- Built-in filtration system
- Easy to use
- Separate hot/cold power switch
- Automatic heating shut-off when hot water tank is empty or hot temperature reached
- Automatic float valve
- High efficiency sealed compressor cooling system
- Type 304 stainless steel hot and cold water tanks
- Easy access front panel for service of RO/filter system
- Easy to clean

Specifications

- Floor Sharp weight: 48 lbs.
- Premium Floor Sharp weight: 59 lbs.
- Floor Sharp dimensions: (D) 13" x (W) 13" x (H) 42"
- Premium Floor Sharp dimensions: (D) 13" x (W) 13" x (H) 50"
- Hot water tank temperature: 176-194°F
- Heating power: 500W
- Cooling power: 112W
- Hot water tank volume: 0.5 gal/heating
- Cold water tank volume: 1 gallon
- Cooling capacity: 1.95 gal per hour
- Voltage: 110V-120V 50/60Hz

This product is manufactured using ceramic balls that meet standard ANSI 61/42 WQA Seal Certified, GAC which meets standard ANSI 42 NSF Certified, KDF which meets standard ANSI 61/42 Certified, and pre and post one-micron filter pads which are from ISO 9001 approved manufacturers.

* if present in the water
